

The Fundamentals of Generative AI & Healthcare

Healthcare is facing
significant change

Expectations
are higher
than ever

Workforces
are becoming
burned out

Data volume is
increasing
rapidly

Constant
pressure to
innovate

Addressing
these pressures
while lowering
healthcare costs
is a **societal issue**

A doctor in a white lab coat is talking to a patient in a blue sweater in a clinical setting. The doctor is on the right, and the patient is on the left. The background shows medical equipment and a window with blinds.

Nuance Dragon Ambient eXperience (DAX) Copilot

DAX Copilot is an AI-powered, voice-enabled solution that relieves clinicians from administrative burden. It automatically documents patient encounters accurately and efficiently at the point of care with note delivery in seconds saving them time, which improves satisfaction, patient experiences, operational efficiencies, and financial outcomes.

Fully automated note

Reduces documentation burden

Allow focus on patient during visit

Increase time efficiency writing note

Benefits

Explore new AI capabilities to empower patients and simplify medical jargon

Azure AI Health Insights

Help clinicians and researchers make more informed decisions with pre-built models that perform analysis and provide inferences to facilitate patient care

Azure AI Health Bot

Bring generative AI to healthcare chatbots and virtual assistants with out-of-the-box healthcare intelligence—all customized and connected to your existing workflows

Text Analytics for Health

Apply machine learning intelligence to extract and label essential medical information from unstructured texts in seven languages

Powered by Azure AI services

The image and voice in this video are generated by AI, not recorded by real person.

Text Analytics for Health

- **Powerful natural language processing** - A Microsoft Cognitive Service that allows to analyze unstructured clinical data in multiple languages
- **Analyzes clinical data** - Extracts medical terms, relationships, assertions & clinical coding linking and structures into FHIR
- **Integrates with other services** - works seamlessly with all Azure platform services and supports FHIR interoperability.
- **Enables a wide range of scenarios** - including patient insights, clinical trials matching, predictive analytics, clinical coding, registries, medical publications knowledge mining, and decision support.
